

# 2017 SUSQUEHANNA IMPACTS FORUMS

Research has shown that more than 100,000 acres of forest could be cleared in the watershed by 2030 to accommodate natural gas well pads, access roads, and gathering lines.

## EXPLORING THE RISKS OF OIL AND GAS DEVELOPMENT

Join us for a look at how natural gas development is affecting the Susquehanna River Watershed in PA. Discuss and learn about ways to become involved with efforts to protect this important watershed from the challenges of fracking. These three forums are free and open to the public.
